

TQC KARSTEN TUBE PENETRATION TEST

LI7500

DATASHEET

PRODUCT DESCRIPTION

The TQC Karsten Tube Penetration Test is a simple test for measuring the degree of water penetration into building materials such as concrete, stone and plaster. The test consists of a glass tube filled with water, bonded to the test material with putty. Water pressure is then exerted on the surface. A graduated scale indicates, over time, the amount of water penetrated into the surface.

The TQC Karsten Tube Penetration Test contains 3 tubes for horizontal surfaces, 3 tubes for vertical surfaces (or at choice any other combination of total 6 tubes), a water bottle, marker and putty to place the tubes leak-tight on the surface. Additional vertical or horizontal tubes are available on request.

APPLICATION/APPLICATION

Used for detection of coating porosity (pin-holes, or holidays) in dielectric (insulation type) coatings on conductive substrates, including concrete.

STANDARD DELIVERY

The TQC Karsten Test kit contains

- 3 tubes for horizontal surfaces
- 3 tubes for vertical surfaces
- water bottle
- marker and putty to place the tubes leak-tight on the surface

Testing tube
for horizontal
surfaces

Testing tube
for vertical
surfaces

ART NO.

LI7500 TQC Karsten Tube Penetration Test

SPECIAL CARE

- Always clean the instrument after use.
- Always keep the instrument in its case when not in use.

DISCLAIMER

The right of technical modifications is reserved.
