Description

This series is capable for material and product tests that are above 100KN in accordance with standards ASTM, ISO, JIS, and GB. The machine is equipped with Servo motor and precise transmission system and manufactured with rigid and endurable structure to withstand damage. Suitable types of material are metal, composites and material for architecture; a quiet testing environment and accurate test results are guaranteed.

The 7" TFT touch screen is an optional accessory to perform tests in stand-alone mode. The crosshead can be controlled by handwheel to position grips at a minimum scale, to calibrate loadcells and to prevent overload. The speed range is from 0.2 to 375 mm/min and the range conforms to various standards.
